Manual for Camera Manufacturers

Community Platform Overview

Community Platform is an initiative to improve global IP camera compatibility. By sharing IP camera connectivity information, you can contribute to the IP video community to help everyone connecting to the same type of camera you're using. You also benefit from the knowledge shared by others. Visit our official website for more information: <http://geniusvision.net/cp>

Adding a brand in Community Platform

Click **Camera Compatibility List** in main menu...

Click **[Add manufacturer]**...

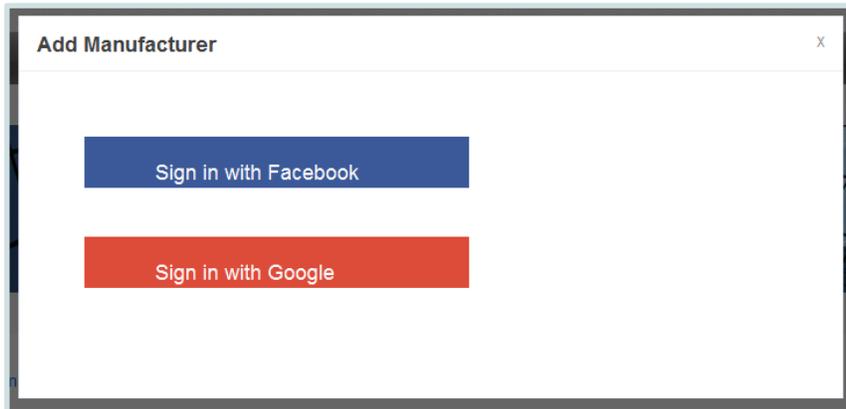

Camera Compatibility List **PENDING**

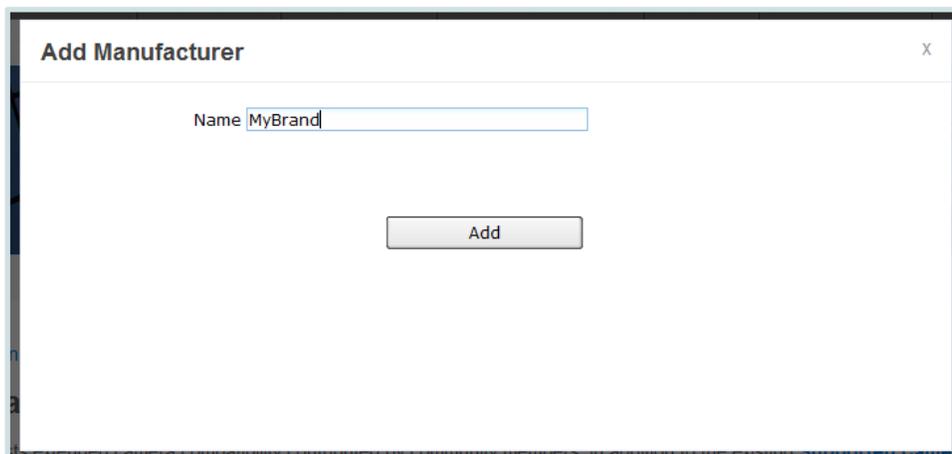

This page lists extended camera compatibility contributed by community members, in addition to the existing [Supported Camera List](#) and the [ONVIF Supported Camera Matrix](#).

[\[Add manufacturer\]](#)

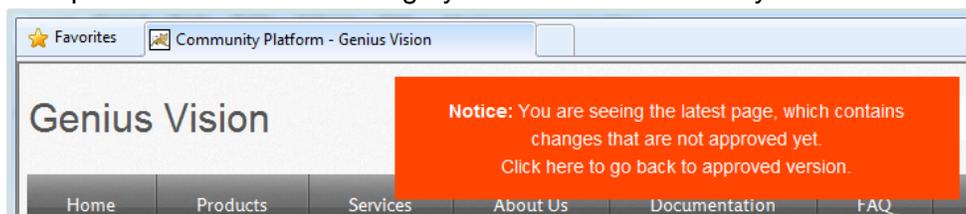

You need to sign in with either Google or Facebook account...

Input your brand name and click Add...

You see this message if your brand is added successfully. Other users can't see your brand yet before approval. You can still proceed to edit and manage your brand in Community Platform.

Click your brand in **Camera Compatibility List** and you see this...

Community Platform / [Compatibility List](#) / Manufacturer: [MyBrand](#)

Manufacturer: MyBrand 

[\[Edit name\]](#) [\[Add series\]](#)  0  0

Logo	[Edit]
Official website	[Edit]

[\[Request delete 'MyBrand'\]](#)

In this page you can:

- **Edit your brand name**
- **Add/edit logo for your brand**
- **Add/edit website for your brand**
- **Add camera series/model**
- **Request delete your brand**

Editing brand name

Edit Name

Name

Editing and previewing brand logo

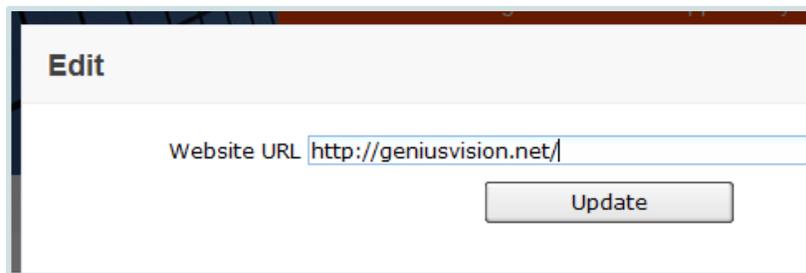

Enter a URL for your logo. You need to host the logo by yourself. The image won't be stored in Community Platform. So if the link is broken, users see broken image.

Adding camera series/model

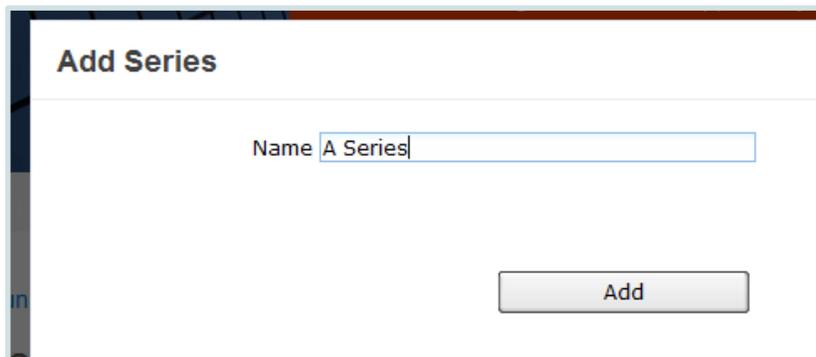

You must add a series before you can add camera models. To add a series, click [Add series]...

[Community Platform](#) / [Compatibility List](#) / Manufacturer [MyBrand](#)

Manufacturer: MyBrand 

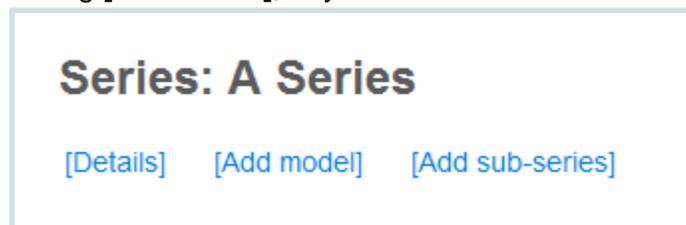

[\[Edit name\]](#) [\[Add series\]](#)

Add Series

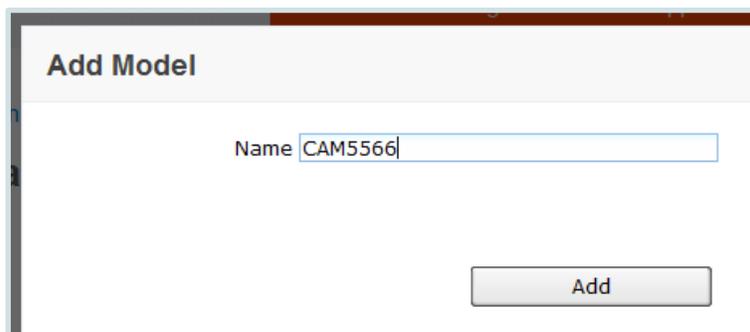

Name

Now you can add model by clicking **[Add model]**, or you can add sub-series.

Series: A Series

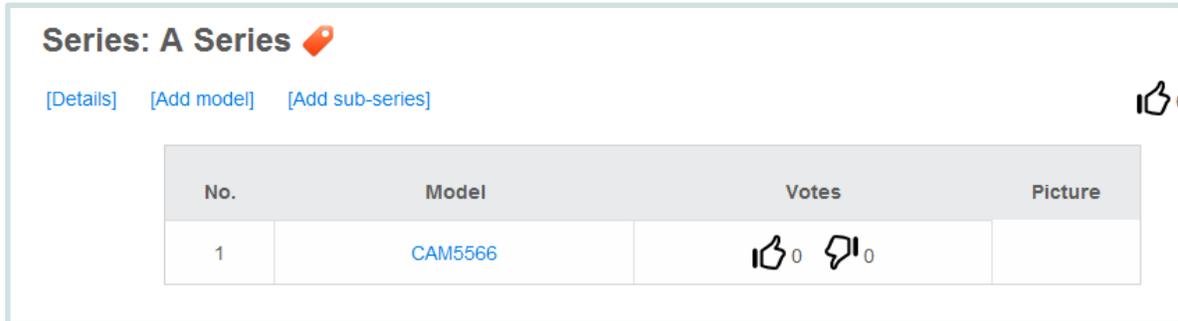

[\[Details\]](#) [\[Add model\]](#) [\[Add sub-series\]](#)

Add Model

Name

Your camera model is added successfully, now you can click it to edit/manage details for this model.

Series: A Series 

[\[Details\]](#) [\[Add model\]](#) [\[Add sub-series\]](#) 

No.	Model	Votes	Picture
1	CAM5566	 0  0	

Managing Camera Models

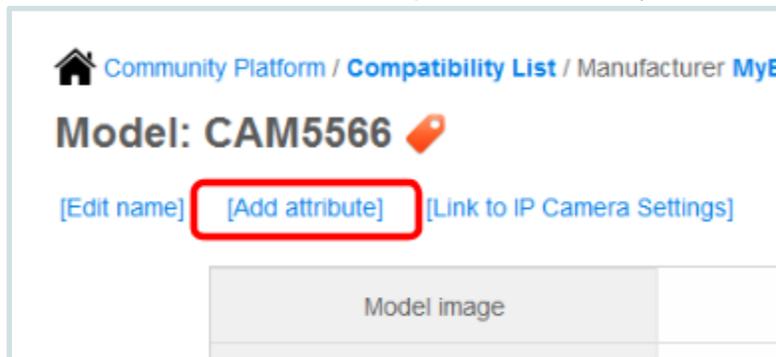

For every camera model, you can:

- Add/edit attributes
- Add/edit image
- Suggest RTSP/ONVIF settings
- Link to camera settings (for NVR)

Editing camera attributes (features)

Camera attributes define functions, features, and spec of a camera model. Attributes are optional. They are not used by NVR software when connecting to cameras. They are just for users' reference.

Click **[Add attribute]** to add an attribute. Valid values depend on the item you selected.

 [Community Platform](#) / [Compatibility List](#) / [Manufacturer MyB](#)

Model: CAM5566 

[\[Edit name\]](#) [\[Add attribute\]](#) [\[Link to IP Camera Settings\]](#)

Suggesting RTSP/ONVIF settings

RTSP/ONVIF settings are downloaded by NVR software and used for connecting to cameras.

Suggest RTSP or ONVIF settings

RTSP is a generic video streaming protocol

ONVIF is a IP video globalization standard. Urge your supplier to join our [free ONVIF verification program](#) today.

- You need to specify how you want to input RTSP URL before inputting it. URL is required for NVR software to request video stream from camera using RTSP protocol.
- Other parameters are optional. You may want to specify **PacketBufSize** if the data rate is high and broken image is expected. (See [this FAQ entry](#))
- Default Username and password may also be required if the camera has more restrict authentication policy.

Suggest RTSP or ONVIF settings

RTSP URL

Standard -- rtsp://ipcamera-address/
 Standard, with custom port -- rtsp://ipcamera-address:554/
 Specify relative URL suffix -- rtsp://ipcamera-address:8999/video01
 Specify absolute URL --

Others Options

Default [PacketBufSize](#) bytes (optional)
 Default Transport (optional)
 Default UserName Password (optional)

- For ONVIF, default HTTP port (80) usually works but it's not uncommon that a camera use 80 for web and other port for ONVIF.
- Username and password are usually required as ONVIF not only provides video streaming functions but also configuration.
- Event and PTZ are optional but you must specify them if you want to use these functions in Genius Vision NVR.

Suggest RTSP or ONVIF settings

ONVIF HTTP Port
 ONVIF [Event Template](#) (optional)
 ONVIF PTZ Mode (optional)
 Default [PacketBufSize](#) (optional)
 Default RTSP Transport (optional)
 Default UserName Password (optional)

After you suggest settings and it's approved, users can see it in camera model page just like settings uploaded with NVR software. They can be downloaded/rated as well. So please try to make it correct, or users may feel frustrating when using these settings to connect to cameras in NVR software.

Other IP Camera Settings Alternatives

No.	Description	Votes	Proposed By
1	Suggested RTSP settings	 0  0  0  0	Lee Lin

Deeper SDK integration with Generic Camera Driver

It is also possible to perform deep integration to custom camera SDK that opens the possibility to access to following functionality through Genius Vision NVR software. Refer "[Generic Camera Driver Manual](#)" for more

details. You will also need to read "[Community Platform Manual](#)" to see how to upload camera settings to Community Platform from Genius Vision NVR software.
